

W03-P1: test-db.js can retrieve 5 data of category_28 tables

The screenshot shows a Visual Studio Code editor with three files open: `app.js`, `test-db.js`, and `test.json`.

app.js (lines 7-8 highlighted):

```
const db = require('./utils/database');
const testDB = require('./utils/test-db');
```

test-db.js (lines 4-15 highlighted):

```
const db = require('./database');

const testDB = async () => {
  try {
    let results = await db.query('select * from category_28');
    console.log('results', JSON.stringify(results));
  } catch (error) {
    console.log(error);
  }
}

testDB();

module.exports = testDB;
```

test.json (lines 1-27 highlighted):

```

}
```

The terminal output shows the command `node ./.bin/www` and the JSON results of the database query.

W03-P2: fetch category data and replace crown2_xx/index.ejs with these data
